40 Shock absorber leaks: assessment aid

40 17 70 2018194/8 July 12, 2017. Supersedes Technical Service Bulletin Group 40 number 15-49 dated December 18, 2015 for reasons listed below.

Model(s)	Year	VIN Range	Vehicle-Specific Equipment
All	2006 - 2018	All	Not Applicable

Condition

REVISION HISTORY		
Revision	Date	Purpose
8	-	Revised header data (Added model year)
7	01/06/2016	Revised header data (Added model years)
6	07/02/2014	Revised header data (Added model year)

Oil appears on one or several shock absorbers.

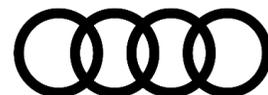

Technical Background

Oil may appear on a shock absorber for one of the following reasons:

- As a result of a leak because the shock absorber is damaged.
- As a result of residue from when the shock was filled during production, or as a result of slight condensation in the seal area. This small amount of oil is for lubrication and it reduces wear on the seal.

Production Solution

Not applicable.

Technical Service Bulletin

Service

Determine if the shock absorber is leaking, or if the oil is only from residue or condensation:

Leaking shock absorbers

A leaking shock absorber is characterized by a wet film of oil running down the pipe (Figure 1 and Figure 2).

Leaking shock absorbers need to be replaced.

Figure 2. A leaking shock absorber.

Shock absorbers with oil marks

Technical Service Bulletin

A light film of dried oil or oil marks on the pipe beneath the dust guard are not a clear indicator of a leaking shock. These marks are a result of residue from when the shock was filled during production, or of slight condensation in the seal area. This small amount of oil is for lubrication and it reduces wear on the seal (Figure 3 and Figure 4).

This condition does not affect the shock absorber. No repair is necessary.

Figure 3. A shock absorber that is not leaking.

Figure 4. A shock absorber that is not leaking.

Tip: For additional information, see “Shock absorbers, checking” in the Elsa Repair Manual.

Warranty

This TSB is informational only and not applicable to any Audi Warranty.
